> manufactured to comply with the radiofrequency (RF) exposure thresholds Your telephone is equipped with a built-in antenna. For optimal operation, you Your telephone is a transceiver that operates on GSM networks with recommended by international requirements (ICNIRP) (1) and by the Council of should avoid touching it or degrading it. the European Union (Recommendation 1999/519/EC) (2)

These limits are part of a set of requirements and establish authorised radiofrequency levels for the public. These limits were established by independent You are advised to switch off the telephone from time to optimise its consult your doctor before playing video games on your phone or enabling a Ratteries must be disposed of in accordance with locally applicable environmental groups of experts on the basis of regular and detailed scientific assessments. regulations. Only use the battery for the purpose for which it was designed. Never They include a significant safety margin intended to ensure the safety of all.

The exposure standard for mobile phones is determined by a measurement unit Obigo® The exposure standard for mobile phones is determined by a miscondiniant known as the Specific Absorption Rate or "SAR". The SAR limit is set by international white the standard of the stand requirements or by the Council of the European Union at 2 watts/kilogram (W/kg) averaged over 10 grams of body tissue. The tests used to determine SAR levels were carried out on the basis of standard usage modes with the phones transmitting at their maximum nower level over the entire range of frequency hands.

Although the SAR was established at the highest certified level, the actual SAR level for the mobile phone during use is generally much lower than the maximum values. In fact, since mobile phones are designed to operate at many different power levels, they only use the minimum level of power required to provide a connection to the network. In theory, the closer you are to a base station antenna. the lower the power level required by the mobile phone.

- The ICNIRP requirements are applicable in the following regions: Central America (except Mexico), South America, North and South Africa, Pacific Asia (except Korea), Australia.
- The European recommendation (1999/519/EC) is applicable in the following regions: Europe, Israel.

against the standard is 1.0 W/kg. While there may be differences between the SAR levels on various phones and at various positions, they all meet the relevan International guidelines and EU requirements for RF (radio-waves) exposure.

The World Health Organisation (WHO) considers that present scientific information does not indicate the need for any special precautions for use of • Hot Line Number: see "TCT Mobile Services" leaflet or go to our mobile phones. If individuals are concerned, they might choose to limit their own or their children's RF exposure by limiting the length of calls, or using "hands free" devices to keep mobile phones away from the head and body (fact sheet On our Internet site, you will find our FAQ (Frequently Asked available on the following site: http://www.who.int/peh-emf.

5 hars) It is also advised to keep the telephone, during communications, away Your mobile phone is a radio transmitter/receiver. It was designed and from the belly of pregnant women and from the lower abdomen for teenagers.

As mobile devices offer a range of functions, they can be used in positions other than against your ear. In such circumstances the device will be compliant with the guidelines when used with headset. If you are not using headset ensure that whatever product is used is free of any metal and that it positions the phone at least 2 cm away from the body.
